Aside from the early

wringer/washer machine of the mid-19th century, washing and drying machines were not combined until the latter half of the 20th century. The first completely automatic clothes washer was developed by Bendix Home Appliances in 1937; the same company also invented the first washer-dryer combination unit in 1953. a398f40d51 The building's namesake, John Hollensbury, reportedly built the house in 1830 to stop people loitering in the alley adjoining his house and to prevent wagon-wheel hubs from damaging the house's exterior walls. This is the most commonly known story as to why the house was built, but there are also two other possibilities, the first being due to a dispute with his neighbor, and the second as a gift to his two daughters. Whichever story is true, the scenario involving... a398f40d51 The small size of

these machines, compared to the total space consumed by a separate autowasher and tumble dryer, suits them to small homes, apartments, and condominiums. Combo units typically have a small height, allowing them to fit into confined places. The units are notable for their ability to wash and dry clothes in a single cycle without the need to transfer laundry between two machines. a398f40d51 == History == a398f40d51 Tumble dryers continuously draw in air from their surroundings and heat it before passing it through the tumbler. The resulting hot, humid air is usually vented outside to make room for more air to continue the drying process. The air can be heated using a gas flame, in which case the humid air contains combustion products such as CO₂, or it can be heated electrically using nichrome wire or

a398f40d51 Modern-day home appliances use electric power to automatically clean clothes. The user adds laundry detergent, which is sold in liquid, powder, or dehydrated sheet form, to the wash water. The machines are also found in commercial laundromats where customers pay-per-use.

a398f40d51 Many dryers consist of a rotating drum called a "tumbler" through which heated air is circulated to evaporate moisture while the tumbler is rotated to maintain air space between the articles. Using such a machine may cause clothes to shrink or become less soft (by loss of short soft fibers). A

simpler non-rotating machine called a "drying cabinet" may be used for delicate fabrics and other items not suitable for a tumble dryer. Other machines include steam to de-shrink clothes and eliminate the need for ironing. a398f40d51 DPWS defines an architecture in which devices run two types of services: hosting services and hosted services. Hosting services are directly associated with a device, and play an important part in the device discovery process. Hosted services are mostly functional and depend on their hosting device for discovery. a398f40d51 The idea of an automatic washing machine had been around for many years. However, these were crude mechanical efforts that typically involved a manually operated crank or similar design. In many ways, the patent of the new Thor washer sounds modern, even today. The patent states that a

"perforated cylinder is rotatably mounted within the tub containing the wash water". A series of blades lifted the clothes as the cylinder rotated. After 8 rotations in one direction, the machine would reverse rotation to "prevent the cloths from wadding up into a compact mass". Drive belts attached to a Westinghouse motor connected to three wheels of different sizes, which moved the drum during operation. The design...

a398f40d51 Before the invention of washing machines and indoor plumbing, clothes had to be washed by hand in a multi-step process that often

occupied an entire day of work, plus drying and ironing. The first English patent under the category of washing machines was issued in 1691. Electric washing machines were advertised and discussed in newspapers as early as 1904, and the first automatic washing machine was introduced in 1937. The spread of the washing machine has been seen to be a force behind the improvement of women's position in society, and has been compared to the contraceptive pill, abortion rights, and the... a398f40d51
