Bra size 52 oz/cu in). While there are multiple bra sizing systems in use around the world, the bra size usually consists of a number indicating the size of the band around the torso, and one or more letters that indicate the breast cup size. Bra cup sizes were invented in 1932 while band sizes became popular in the 1940s. If a cup is a hemisphere, its volume V is given by the following formula: $V = \frac{2}{3} \pi r^3 = \frac{2}{3} \pi \left(\frac{\text{Bra size}}{2}\right)^3$ (also known as brassiere measurement or bust size) indicates the characteristics of a bra to accurately fit the breasts. For convenience, because of the impracticality of determining the dimensions of each breast, the volume of the bra cup, or cup size, is based on the difference between band length and over-the-bust measurement 66c98175f4

Anette Moldvaer states that a flat white consists of a double espresso (50 ml; 1.8 imp fl oz; 1.7 US fl oz) and about 130 ml (4.6 imp fl oz; 4.4 US fl oz) of steamed milk with a 5 mm (0.20 in) layer of microfoam. According to a survey of industry commentators, a flat white is a shorter drink with a thin layer of microfoam (hence the 'flat' in flat white), as opposed to the thick layer of foam on the top of a cappuccino. The beverage is often served with a pattern (latte art) on the surface. 66c98175f4 == United Kingdom == 66c98175f4 nipperkin (measure for liquor, containing no more than 1/2 pint) 66c98175f4 == Description == 66c98175f4 In most... 66c98175f4

For most of history, most cookbooks did not specify quantities precisely, instead talking of "a nice leg of spring lamb", a "cupful" of lentils, a piece of butter "the size of a small apricot", and "sufficient" salt. Informal measurements such as a "pinch", a "drop", or a "hint" (sopçon) continue to be used from time to time. In the US, Fannie Farmer introduced the more exact specification of quantities by volume in

Manufacturers' bra size labelling systems vary by country because no comprehensive international standards exist. Even within a country, one study found that the bra size label was consistently different from the measured size. As a result of all these factors, about 25% of bra-wearing people have a difficult time finding a properly fitted bra, and some choose to...

Manufacturers try to design and manufacture bras that correctly fit the majority of wearers, while individuals try to identify correctly fitting bras among different styles and sizing systems.

History == Today, most of the world prefers metric measurement by weight, though the preference for volume measurements continues among home cooks in the United States and the rest of North America. Different ingredients are measured in different ways: Because of the lack of official definitions, many of these units will not have a consistent value.

Dry bulk ingredients, such as sugar and flour, are measured by weight in most of the world ("250 g flour"), and by volume in North America ("1/2 cup flour"). Small quantities of salt and spices are generally measured
