The largest highway truck sold by Peterbilt at its launch, the 379 was produced in two configurations, a 119-inch BBC (bumper to back of cab length) and an extended-length hood, for a 127-inch BBC. The 379 is externally distinguished from the 359 from the use of an enlarged windshield (allowing for horizontally mounted windshield wipers); the 379 also introduced headlamp-mounted turn signals (relocated from the fender), making rectangular headlamps standard.

The Auto Moto gets a claimed 83 miles per US gallon (2.8 L/100 km; 100 mpg-imp), making it more fuel-efficient than most hybrid cars on the market. The Auto Moto features an FM radio player with MP3 connection that plays music through its integrated stereo system. Other standard features included on The Auto Moto are a built in 72 liter trunk, 2 dashboard storage compartments, an ABS braking

An engine has one or more devices for converting energy it produces into a usable form, electricity connection through the alternator, hydraulic connections from a pump or engine system, compressed air, and engine vacuum; or the engine may be directly tapped through a mechanical connection. Modern vehicles run most accessories on electrical power. Typically, only 2% of a vehicle's total power output has gone towards powering accessories. Electrical and hybrid vehicles may use a larger proportion of energy for accessories, due to reduced inefficiencies in the drive train, especially the elimination of engine idling. 9dfa933f5a == Delivery system == 9dfa933f5a == Plot == 9dfa933f5a == Principle of operation == 9dfa933f5a Washer fluid may sometimes be preheated before being delivered onto the windshield. It consists of a bar pivoted at or near the centre, with force applied from one direction to the pivot and from the other direction to the tips. It is also referred to as an equalizer, leader bar, or double tree. Several whippletrees may be used in series to distribute the force further, such as to simulate pressure over an area as when applying loading to test airplane wings. They were also used for subtraction and addition calculations in mechanical computers. Whippletrees may be used either in compression or tension. Tension whippletrees are used in artful hung mobiles, such as those by artist Alexander Calder 9dfa933f5a

The arm is powered by a motor, often an electric motor, although pneumatic power is also used for some vehicles. The blade is swung back and forth over the glass, pushing water, other precipitation, or any other impediments to visibility from its surface. The speed is usually adjustable on vehicles made after 1969, with several continuous rates and often one or more intermittent settings. Most personal automobiles use two synchronized radial-type arms, while many commercial vehicles use one or more pantograph arms. 9dfa933f5a
