== Science and technology == 07e4d31156 In 1919, Briggs & Stratton purchased the manufacturing rights for a small, simple two-seat vehicle with a gasoline engine called the Smith Flyer from the A.O. Smith Company in Milwaukee. The Flyer had a small gasoline engine mounted on a fifth wheel, or motor wheel. Briggs & Stratton made engine improvements that raised the horsepower and renamed the vehicle the Briggs & Stratton Flyer. The Guinness Book of Records lists the Flyer as the most inexpensive car of all time, selling at US\$125 to US\$150 (equivalent... 07e4d31156

Lawn mower Larger lawn mowers are usually either self-propelled "walk-behind" types or, more often, are "ride-on" mowers that the operator can sit on and control.) is designed to operate either entirely on its own. A robotic lawn mower ("lawn-mowing bot", "mowbot", etc. Smaller mowers often lack any form of self-propulsion, requiring human power to move over a surface; "walk-behind" mowers are self-propelled, requiring a human only to walk behind and guide them. The blades may be powered by manual force, with wheels mechanically connected to the cutting blades so that the blades spin when the mower is pushed forward, or the machine may have a battery-powered or plug-in electric motor. The height of the cut grass may be fixed by the mower's design but generally is adjustable by the operator, typically by a single master lever or by a mechanism on each of the machine's wheels. A lawn mower (also known as a grass cutter or simply mower, also often spelled lawnmower) is a device utilizing one or more revolving blades (or a reel) A lawn mower (also known as a grass cutter or simply mower, also often spelled lawnmower) is a device utilizing one or more revolving blades (or a reel) to cut a grass surface to an even height. The most common self-contained power source for lawn mowers is a small 4-stroke (typically one-cylinder) internal combustion engine 07e4d31156

After his death in 1930, the house was purchased by Mrs. McCreagh-Thornhill... 07e4d31156 OpenEPOS, in the comparison of real-time operating systems 07e4d31156 The engines are small in both physical dimensions and power output, relative to larger automobile engines. Power outputs are typically less than 11 kW (15 hp). The smallest of all are used in handheld garden machinery, such as string trimmers and chainsaws, which have a displacement as small as 24 cc (1.5 cu in). Production cost is often a key
