In Combat Racing, the player controls characters from the Jak and Dexter series, all of which race in customizable dune buggy-style vehicles. The two main modes of play in the game are Adventure and Exhibition. Jak, the main character of the series, is the only playable character in the Adventure mode... afcfeba6d2

The military left in 1992. Over a period of some years the vacant structures were occupied by various tribes of hippies and anarchists. Following battles with the city government, squatters won the rights to four of the original twenty barracks. In many An electric car or electric vehicle (EV) is an automobile that uses electrical energy as the primary source of propulsion. The term normally refers to a plug-in electric vehicle, typically a battery electric vehicle (BEV), which only uses energy stored in on-board battery packs, but broadly may also include plug-in hybrid electric vehicle (PHEV), range-extended electric vehicle (REEV)

and fuel cell electric vehicle (FCEV), which can convert electric power from other fuels via a generator or a fuel cell

While these techniques can be applied by any driver, energy-efficient driving (often called "eco-driving") has become a major focus of modern fleet management. As a key part of fleet digitalization, companies use telematics to automatically monitor and manage fuel economy. A fleet telematics system collects data on behaviors that waste fuel, such as harsh acceleration, speeding, and idling. This information is then used in driver scoring applications to identify and coach drivers. This is often combined with dedicated fuel-management systems that use high-precision fuel level sensors to get exact fuel consumption data and prevent gasoline theft. What water-fuelled cars are not Compared to conventional internal combustion engine (ICE) vehicles, electric cars are quieter, more responsive, have superior energy conversion efficiency and no exhaust emissions, as well as a typically lower overall carbon footprint from manufacturing to end of life (even when a fossil-fuel power plant supplying the electricity might add to its emissions). Due to the superior efficiency of electric motors, electric cars also generate less waste heat, thus reducing the need for engine cooling systems that are often large, complicated and maintenance-prone in ICE vehicles.

Auto racing In North America, the term is commonly used to describe all forms of automobile sport including non-racing disciplines. In single-seater Auto racing (also known as car racing, motor racing, or automobile racing) is a motorsport involving the racing of automobiles for competition. There is also a growing number of events for electric racing cars, such as the Formula E, the Eco Grand Prix or the Electric GT Championship

Cities that are fully car-free prohibit all use of private cars in the city limits, while cities that are partly car-free have car-free zones but allow some private car use in other areas. These zones tend to be focused around the city center. Car-free city projects are designed around the needs of people rather than cars, with careful zoning that increases pedestrian mobility and efficient structural placement.

[citation Vauban (German pronunciation: [voˈbãː]) is a neighbourhood (Stadtteil) to the south of the town centre in Freiburg, Germany. It was built as "a sustainable model district" on the site of a former French military base named after Sébastien Le Prestre de Vauban, the 17th century French Marshal who built fortifications

in Freiburg while the region was under French rule

The gameplay differs from previous installments in the series, focusing on arcade racing rather than action-adventure gameplay. The driving mechanics of the game were modeled after the previous entry in the series, *Jak 3*. Furthermore, *Combat Racing* was the first *Jak and Daxter* game to feature a multiplayer mode, with the second being *Daxter*. In 2017, the game was re-released for the PlayStation 4, alongside *Jak and Daxter: The Precursor Legacy*, *Jak II*, and *Jak 3*, all of which later became available on PlayStation 5 through backwards compatibility.

*Jak X: Combat Racing* *Jak*, the main character of the series, is the only playable character in the Adventure mode, *Jak X: Combat Racing* is a 2005 vehicular combat video game developed by Naughty Dog and published by Sony Computer Entertainment for the PlayStation 2 (PS2). modes of play in the game are Adventure and Exhibition. A spin-off following *Jak 3* (2004), it follows protagonist *Jak* and his allies who, after being poisoned, must compete in a combat racing championship to obtain an antidote

Ecovillagers are united by shared ecological, social-economic and cultural-spiritual values. Concretely, ecovillagers seek alternatives to ecologically destructive electrical, water, transportation, and waste-treatment systems, as well as the larger... At the same time a group called "Forum Vauban" was pressing the City Council to develop the site in an eco-friendly way. The remaining 38 hectares were acquired by Freiburg City... The French inventor Nicolas-Joseph Cugnot built the first steam-powered road vehicle in 1769, and the Swiss inventor François Isaac de Rivaz designed and constructed the first internal combustion-powered automobile in 1808. The modern car—a practical, marketable automobile for everyday use—was invented in 1886, when the German inventor Carl Benz patented his Benz Patent-Motorwagen. Commercial cars became widely available during the 20th century. The 1901 Oldsmobile Curved Dash and the 1908 Ford Model T, both American cars, are widely considered the first mass-produced and mass-affordable cars, respectively. Cars were rapidly adopted in the US, where they replaced horse-drawn carriages. In Europe and other parts of the world, demand for automobiles did not increase until after World War II. In the 21st century, car usage is still increasing rapidly, especially in China, India, and other newly industrialised countries.

Car-free city Car-free cities rely on public transport, walking, and cycling for travel, as opposed to private motor vehicles. Many cities in Asia, Europe, and Africa have car-free areas because they were created before the invention of motor vehicles, In addition, many developing cities in Asia are adopting the car-free model to modernize their

infrastructure. The concept of the car-free city model gained traction in the second half of the 20th century due to congestion and infrastructure issues, as well as the proposed environmental and quality of life benefits. City, United Arab Emirates, is a futuristic city designed with eco-friendly principles in mind. Masdar City adopted a car-free philosophy as part of its A car-free city is an urban area without motor vehicles. The term "car-free zone" is applied to districts where motor vehicles are prohibited afcfeba6d2

Water-fuelled car Water-fuelled cars have been the subject of numerous international patents, newspaper and popular science magazine articles, local television news coverage, and websites. These vehicles may be claimed to produce fuel from water on board with no other energy input, or may be a hybrid claiming to derive some of its energy from water in addition to a conventional source (such as gasoline). Water-fuelled cars have been the subject of numerous A water-fuelled car is an automobile that hypothetically derives its energy directly from water. There is no way to extract chemical energy from water alone which is consistent with the laws of physics. The claims for these devices have been found to be pseudoscience and some were found to be tied to investment frauds. There are now numerous different categories, each with different rules and regulations. afcfeba6d2 Auto racing has existed since the invention of the automobile. Races of various types were organized, with the first recorded as early as 1867. Many of the earliest events were effectively reliability trials, aimed at proving these new machines were a practical mode of transport, but soon became an important way for automobile makers to demonstrate their machines. By the 1930s, specialist racing cars had developed. afcfeba6d2 Simple fuel-efficiency... afcfeba6d2

Ecovillage Most range from a population of 50 to 250 individuals, although some are smaller, and traditional ecovillages are often much larger. It is consciously designed through locally owned, participatory processes to regenerate and restore its social and natural environments. Selvforsynende Landsby Diggers and Dreamers Eco-cities Eco municipalities Ecodistrict Eco-communalism Eco-feminism Eco-tourism Garden city movement Green cities An ecovillage is a traditional or intentional community that aims to become more socially, culturally, economically or environmentally sustainable. Larger ecovillages often exist as networks of smaller sub-communities. An ecovillage strives to have the least possible negative impact on the natural environment through the intentional physical design and behavioural choices of its inhabitants. Some ecovillages have grown through like-minded individuals, families, or other small groups—who are not members, at least at the outset—settling on the ecovillage's

periphery and participating de facto in the community. There are currently more than 10,000 ecovillages around the world

**Green vehicle** A green vehicle, clean vehicle, eco-friendly vehicle or environmentally friendly vehicle is a road motor vehicle that produces less harmful impacts to the environment than comparable conventional internal combustion engine vehicles running on gasoline or diesel, or one that uses certain alternative fuels. Presently, in some countries the term is used for any vehicle complying or surpassing the more stringent European emission standards (such as Euro6), or California's zero-emissions vehicle standards (such as ZEV, ULEV, SULEV, PZEV), or the low-carbon fuel standards enacted in several countries

**Energy-efficient driving** Many drivers have the potential to improve their fuel efficiency significantly. Simple things such as keeping tires properly inflated, having a vehicle well-maintained and avoiding idling can dramatically improve fuel efficiency. While these techniques can be applied by any driver, energy-efficient driving (often called "eco-driving") has become a major Energy-efficient driving techniques are used by drivers who wish to reduce their fuel consumption, and thus maximize fuel efficiency. techniques is called "hypermiling".
