The bicycle was invented in Europe in the 19th century. By the early 21st century, there were more than 1 billion bicycles. Bicycles are the principal means of transport in many regions. They are also popular for recreation, and have been adapted for use as children's toys. Bicycles are used for commuting, shopping, fitness, military and police applications, courier services, bicycle racing, and artistic cycling.

Paul de Vivie more prone to skidding, but this is perhaps because their tyres have no tread and that the bicycle is very short. That universal agreement has fixed on

Bicycle tire Although the use of a pneumatic tire greatly reduces rolling resistance compared to the use of a rigid wheel or solid tire, the tires are still typically the second largest source, after wind resistance (air drag), of power consumption on a level road. The first bicycle "tires" were iron bands on the wooden wheels of velocipedes. Bicycle tires provide an important source of suspension, generate the lateral forces necessary for balancing and turning, and generate the longitudinal forces necessary for propulsion and braking. The first A bicycle tire (tyre in Commonwealth English) is a tire that fits on the wheel of a bicycle or similar vehicle. The basic shape and configuration of a typical upright or "safety" bicycle, has changed little since the first chain-driven model was developed around 1885. However, many details have been improved, especially since the advent of modern materials and computer-aided design. These have allowed for a proliferation of specialized designs for many types of cycling. In the 21st century, electric bicycles have become popular. ff2223fc36
