Firebox (steam engine) "mudholes," or washout plugs, allow access to the interior of the boiler for washing and scraping away boiler mud and scale. The sheets on the left and right In a steam engine, the firebox is the area where the fuel is burned, producing heat to boil the water in the boiler. The hot gases generated in the firebox are pulled through a rack of tubes running through the boiler. Most are somewhat box-shaped, hence the name

A cartridge without a projectile is called a blank; one that is completely inert (contains no active primer and no propellant) is called a dummy; one that failed to ignite and shoot off the projectile is called a dud; and one that ignited but failed to sufficiently push the projectile out of the barrel is called a squib. Critics praised Kelly for his contributions to the song. In the US, "Laundromat" peaked at number 58 on the Billboard Hot 100 chart and was ranked at number 92 on the Billboard Year-End chart for the Hot R&B/Hip-Hop Singles & Tracks ranking. The single received heavy airplay and appeared on the Hot R&B/Hip-Hop Singles & Tracks Billboard chart; journalists cited this success as evidence that Kelly's 2002 arrest for possessing child pornography did not hurt his career. "Laundromat" further reached number 33 on the UK Singles Chart, number 89 on the Scottish Singles Chart,...

Packaging machinery applicators Orienting, unscrambling machines Package filling and closing machines Palletizing, depalletizing, unit load assembly Product identification: Packaging machinery is used throughout all packaging operations, involving primary packages to distribution packs. This includes many packaging processes: fabrication, cleaning, filling, sealing, combining, labeling, overwrapping, palletizing

== Steam locomotive fire tube firebox == Modern-day home appliances use electric power to automatically clean clothes. The user adds laundry detergent, which is sold in liquid, powder, or dehydrated sheet form, to the wash water. The machines are also found in commercial laundromats where customers pay-per-use.

69e95c4c2a Some packaging operations cannot be accomplished without packaging equipment. For example, many packages require heat seals to close or seal the package. Heat sealers are needed, even in slow labor-intensive operations. 69e95c4c2a

Coffee production After this, the beans are stripped of their remaining dry skin and fruit residue. water in tanks or in special washing machines. Coffee production is a major source of income for 12. Once they are cleaned, sorted, and graded, they are suitable for distribution. About eight months after coffee cherries appear on a coffee plant, the cherries are harvested either by hand or by machine. 5 million households, most in developing countries. The fermentation process produces wastewater that contains a high organic load, which should be prevented Coffee production is the industrial process of converting the raw fruit (the coffee cherry) of the coffee plant into finished coffee beans. While all green coffee, produced from immature coffee beans, is processed, the method that is used to process coffee varies, and significantly affects the flavor of coffee once it is roasted and brewed. Then they are, depending on the method, pulped and then dried or simply set out to dry 69e95c4c2a

Before the invention of washing machines and indoor plumbing, clothes had to be washed by hand in a multi-step process that often occupied an entire day of work, plus drying and ironing. The first English patent under the category of washing machines was issued in 1691. Electric washing machines were advertised and discussed in newspapers as early as 1904, and the first automatic washing machine was introduced in 1937. The spread of the washing machine has been seen to be a force behind the improvement of women's position in society, and has been compared to the contraceptive pill, abortion rights, and the... 69e95c4c2a

Cartridge (firearms) Although in popular usage the term "bullet" is often used to refer to a complete cartridge, the correct usage only refers to the projectile. shot, or slug), a propellant substance (smokeless powder, black powder substitute, or black powder) and an ignition device (primer or percussion cap) A cartridge, also known as a round, is a type of pre-assembled firearm ammunition packaging a projectile (bullet, shot, or slug), a propellant substance (smokeless powder, black powder substitute, or black powder) and an ignition device (primer or percussion cap) within a metallic, paper, or plastic case that is precisely made to fit within the barrel chamber of a breechloading gun, for convenient transportation and handling during shooting 69e95c4c2a

Parts washer Parts washers may be as simple as the manual "sink-on-a-drum" common to many auto repair shops, or they may be very complex, multi-stage units with pass-through parts handling systems. Parts washers

are essential in maintenance, repair and remanufacturing operations as well, from cleaning fasteners, nuts, bolts and screws to diesel engine blocks and related parts, rail bearings, wind turbine gears boxes and automotive assemblies. Parts washers are used in new manufacturing and remanufacturing processes; they are designed to clean, degrease and dry bulk loads of small or large parts in preparation for assembly, inspection, surface treatment, packaging and distribution. they are designed to clean, degrease and dry bulk loads of small or large parts in preparation for assembly, inspection, surface treatment, packaging A parts washer is a piece of equipment used to remove contaminants or debris, such as dirt, grime, carbon, oil, grease, metal chips, cutting fluids, mold release agents, ink, paint, and corrosion from workpieces 69e95c4c2a

Centrifuge In a laboratory centrifuge that uses sample tubes, the radial acceleration causes denser particles to settle to the bottom of the tube, while low-density substances rise to the top. This is achieved by spinning the fluid at high speed within a container, thereby separating fluids of different densities (e. It works by causing denser substances and particles to move outward in the radial direction. At the same time, objects that are less dense are displaced and moved to the centre. g. A centrifuge can be a very effective filter that separates contaminants from the main body of fluid. acceleration environments (for example, high-G training for test pilots). Medium-sized centrifuges are used in washing machines and at some swimming pools A centrifuge is a device that uses centrifugal force to subject a specimen to a specified constant force – for example, to separate various components of a fluid. , cream from milk) or liquids from solids 69e95c4c2a

The term handloading is the more technical term that refers generically to any manual assembly of ammunition cartridges, although... 69e95c4c2a A parts washer is distinctly different from a pressure washer in that parts washers typically clean parts automatically in an enclosed cabinet, while pressure washers typically have a single spray jet mounted at the end of a manually operated wand. Modern industrial technology makes it possible to combine many... 69e95c4c2a Military and commercial producers continue to pursue the goal of caseless ammunition. Some artillery ammunition uses the same cartridge concept as found in small arms. In other cases, the artillery shell is separate from the propellant charge. 69e95c4c2a Diapers are primarily worn by babies, toddlers who are not yet toilet trained, and by children who experience bedwetting. They are also used by adults under certain circumstances or with various conditions, such as incontinence. Adult users can include those of advanced age, patients bed-bound in a hospital, individuals with... 69e95c4c2a Industrial scale centrifuges are commonly used in manufacturing and waste processing to sediment suspended solids, or to separate immiscible

liquids. An example is the cream separator found in dairies. Very high speed centrifuges and ultracentrifuges able to provide very high accelerations can separate fine particles down to the nano-scale, and molecules of different masses. Large centrifuges are used to... 69e95c4c2a

Diaper Failure to change a diaper regularly can result in skin problems around the area covered by the diaper. When diapers become wet or soiled, they need to be changed by the wearer or often by a second person, such as a parent or caregiver. appliances (A+ rated machines [according to the EU environmental rating] are preferred) Not washing above 60 °C (140 °F) Washing fuller loads Using baby-led A diaper (, North American English) or a nappy (Australian English, British English, Hiberno-English, New Zealand English) is a type of underwear that allows the wearer to urinate or defecate without using a toilet, by absorbing or containing waste products to prevent soiling of outer clothing or the external environment 69e95c4c2a

Laundromat (song) It was recorded and mixed in Chicago, and was one of the last songs to be produced for the album. The lyrics use the laundromat as a metaphor for the washing away of an old relationship. use the laundromat as a metaphor for the washing away of an old relationship, as exemplified in the chorus: "Soap, powder, bleach, towels / Fabric softener "Laundromat" is a song by American singer Nivea from her 2002 self-titled debut album. Kelly wrote and produced "Laundromat", and performed some uncredited vocals on the recording, which is an R&B and pop track. The track is structured as a telephone call in which Nivea breaks up with her boyfriend, who is played by Kelly. R. Jive released it in the UK as a double A-side single along with "Don't Mess With My Man" on April 28, 2003 69e95c4c2a

With many industries, the effectiveness of the heat seal is critical to product safety so the heat sealing operation must be closely controlled with documented Verification and validation protocols. Food, drug, and medical device regulations require consistent seals on packages. Proper equipment is needed. 69e95c4c2a == Type == 69e95c4c2a

Washing machine The term is mostly applied to machines that use water. Other ways of doing laundry include dry cleaning (which uses alternative cleaning fluids and is performed by specialist businesses) and ultrasonic cleaning. for the spin cycle. While a top-loading washing machine could use a universal motor or DC brushless

motor, it is conventional for top-loading washing A washing machine (laundry machine, clothes washer, or washer) is a machine designed to launder clothing 69e95c4c2a

Diapers are made of cloth or synthetic disposable materials. Cloth diapers are composed of layers of fabric such as cotton, hemp, bamboo, microfiber, or even plastic fibers such as PLA or PU, and can be washed and reused multiple times. Disposable diapers contain absorbent chemicals and are thrown away after use. 69e95c4c2a

Handloading While the root "loading" refers to the filling of muzzle loading firearms with propellant (originally with black gunpowder or less commonly smokeless powder) and a bullet, most of the actual handloading process involves the cartridge case and its preparation. Unlike the propellant, primer and projectile (bullets, shot and slugs), which are all single-use consumables, the case is the only reusable component and its shape, internal capacity and crimping tension are crucial factors influencing the internal ballistics of the cartridge. Handloading using previously fired cartridge cases or shotshells is called reloading (should not be confused with the reloading of a firearm with cartridges, such as by swapping detachable magazines, or using a stripper clip or speedloader to quickly insert new cartridges into a magazine). root "loading" refers to the filling of muzzle loading firearms with propellant (originally with black gunpowder or less commonly smokeless powder) and Handloading is the practice of making firearm cartridges by manually assembling the individual components (metallic/polymer case, primer, propellant and projectile), rather than purchasing mass-produced, factory-loaded commercial ammunition 69e95c4c2a
