Indoor mold Common indoor molds include Aspergillus, Cladosporium, Penicillium, and Stachybotrys chartarum, which contribute to respiratory issues and allergic reactions in sensitive individuals. Mold is a natural, ubiquitous part of the environment and plays an important part in nature by breaking down dead organic matter such as fallen leaves and dead trees; indoors, mold growth should be avoided as it can affect the structural integrity of buildings and pose potential health risks to susceptible individuals. When the temperature, moisture, and available nutrient conditions are correct, the spores can form into new mold colonies where they are deposited. The air conditioning system creates a difference in temperature, encouraging condensation. The spores are like seeds—but invisible to the naked eye—that float through the air and deposit on surfaces. mold growth. There are many types of mold, but all require moisture and a food source for growth. The high rate of dusty air movement through an Indoor mold (American English) or indoor mould (British English), also referred to as mildew, is a fungal growth that develops on wet materials in interior spaces.
