

How To Remove Weed In Lawn

String trimmer Instead of a blade, it uses a whirling monofilament line which protrudes from a rotating spindle at the end of a long shaft topped by a gasoline engine or electric motor. trimmer, also known by the portmanteau strimmer and the trademarks Weedwacker, Weed Eater and Whipper Snipper, is a garden power tool for cutting grass, small A string trimmer, also known by the portmanteau strimmer and the trademarks Weedwacker, Weed Eater and Whipper Snipper, is a garden power tool for cutting grass, small weeds, and groundcover 8f52464d26

The word "strimmer" is a trade name of Black+Decker and is a registered trademark in the United Kingdom, but it is often used as a generic for any string trimmer. From it has been backformed the colloquial verb... 8f52464d26 White clover is the plant most frequently used, sometimes in dwarf cultivars such as 'Pirouette' and 'Pipolina'. Red clover is also used, but is less resistant to treading, cropping, and disease, and needs more frequent reseeding. Tall crimson or incarnate clover, and shorter, more shade-tolerant strawberry clover, are also used. 8f52464d26 == Tool types == 8f52464d26 == History == 8f52464d26

Clover lawn It requires less maintenance than a traditional lawn, uses less water, is more heat-tolerant, and fixes its own nitrogen using symbiotic bacteria in its root nodules, removing the need to fertilize. A clover lawn is composed of clover and can be used as an alternative to grass lawns. If grown continually, it may be susceptible to clover sickness. Clover can be oversown on grass if some grass in the lawn is acceptable. It requires less maintenance than a traditional lawn, uses less A clover lawn is composed of clover and can be used as an alternative to grass lawns. It is less robust to foot traffic than grass, and can stain clothes if bruised. If the variety chosen does not self-seed efficiently in place, it may need resowing every few years 8f52464d26

The fulcrum head weeder has a split tip like a serpent's tongue, and a long thin handle. Many models have a curved piece of metal along the handle which is put against the ground while the tip is digging. The curved metal piece acts as a fulcrum in a lever system. It is helpful to remove weeds either with a tap root or a fibrous root system. 8f52464d26 The string trimmer was invented in the early 1970s by George Ballas of Houston, Texas, who conceived the idea while watching the revolving action of the cleaning brushes in an automatic car wash. His first trimmer was made by attaching pieces of heavy-duty fishing line to a tin can bolted to an edger. Ballas developed this into what he called the "Weed Eater", since it chewed up the grass and weeds around trees. 8f52464d26 The term "lawn", referring to a managed grass space, dates to at least the 16th century. With suburban expansion, the lawn has become culturally ingrained in some areas of the world as part of the desired household aesthetic. However, awareness of the negative environmental impact of this idea is growing. In some jurisdictions where there are water shortages, local government authorities are encouraging alternatives to lawns to reduce water use... 8f52464d26 Many noxious weeds have come to new regions and countries through contaminated shipments of feed and crop seeds, or have been intentionally introduced as ornamental plants for horticultural use. 8f52464d26 == Uses == 8f52464d26 Moss lawns are drought-tolerant and rarely need misting once established (the average US grass lawn uses a hundred times as much water). They do not require mowing, fertilizing, or other amendments, and grow on almost any substrate (apart from metal), and at any soil pH and light level. They can grow under conifers, swallowing the needles, but fallen broad deciduous leaves will kill them if not removed. They can be walked on but not scuffed. 8f52464d26 Weeds are controlled in much of the world by hand (roguing) or with crude hoes. The size of a farmer's holding and yield per unit area are limited by several things and paramount among them is the... 8f52464d26

Noxious weed weed, harmful weed or injurious weed is a weed that has been designated by an agricultural or other governing authority as a plant that is harmful to A noxious weed, harmful weed or injurious weed is a weed that has been designated by an agricultural or other governing authority as a plant that is harmful to agricultural or horticultural crops, natural habitats or ecosystems, or humans or livestock. Most noxious weeds have been introduced into an ecosystem by ignorance, mismanagement, or accident. Some noxious weeds are native, though many localities define them as necessarily being non-native. Typically, they are plants that grow aggressively, multiply quickly without natural controls (such as native herbivores or soil chemistry), and cause adverse effects upon contact or ingestion. Noxious weeds are a major problem in many parts of the world, greatly affecting areas of agriculture, forest management, nature reserves, parks, and other open spaces 8f52464d26

Weeder The fulcrum head weeder has a split tip like A number of common weeding tools are designed to ease the task of removing weeds from gardens and lawns. A number of common weeding tools are designed to ease the task of removing weeds from gardens and lawns 8f52464d26

Weed science ". invasive species (including aquatic weeds) in natural areas and sports/park/home lawn care While any plant can be a weed, approximately 250 plant species are Weed science is a scientific discipline concerned with plants that may be considered weeds, their effects on human activities, and their management "a branch of applied ecology that attempts to modify the environment against natural evolutionary trends 8f52464d26

Taxonomically, the term "weed" has no botanical significance, because a plant that is a weed in one context, is not a weed when growing in a situation where it is wanted. Some plants that are widely regarded as weeds are intentionally grown in gardens and other cultivated settings. For this reason, some plants are sometimes called beneficial weeds. Similarly, volunteer plants from a previous crop are regarded as weeds when growing in... 8f52464d26

Weed Invasive species, plants introduced to an environment where their presence negatively impacts the overall functioning and biodiversity of the ecosystem, may also sometimes be considered weeds. Plants with characteristics that make them hazardous, aesthetically unappealing, difficult to control in managed environments, or otherwise unwanted in farm land, orchards, gardens, lawns, parks, recreational spaces, residential and industrial areas, may all be considered weeds. to go extinct no matter how much damage the environment faces. The concept of weeds is particularly significant in agriculture, where the presence of weeds in fields used to grow crops may cause major losses in yields. White clover is considered by some to be a weed in lawns, but in many other situations is A weed is a plant considered undesirable in a particular situation, growing where it conflicts with human preferences, needs, or goals

Lawns are usually composed only of grass species, subject to weed and pest control, maintained in a green color (e.g., by watering), and are regularly mowed to ensure an acceptable length. Lawns are commonly used around houses, apartments, commercial buildings and offices and many city parks also have large lawn areas. In recreational contexts, the specialised names turf, parade, pitch, field or green may be used, depending on the sport and the continent. 8f52464d26 There are 240 species of true clover, most of which are native to Eurasia, but some of which are naturally found in parts of Africa and the Americas. Clover is traditionally used as a field crop, so there are many commercial cultivars. Many clover species have been... 8f52464d26

Moss lawn They are a defining element in moss gardens Moss lawns are lawns composed of moss, which occur naturally, but can also be cultivated like grass lawns. Moss lawns are lawns composed of moss, which occur naturally, but can also be cultivated like grass lawns. They are a defining element in moss gardens 8f52464d26

Dethatcher Types of dethatchers include motorized dethatchers or those that can be pulled behind a garden tractor. Types of dethatchers include motorized dethatchers or those that can be pulled A dethatcher or lawn scarifier is a device that removes thatch from lawns. A dethatcher or lawn scarifier is a device that removes thatch from lawns 8f52464d26

Lawn mower The most common self-contained power source for lawn mowers is a small 4-stroke (typically one-cylinder) internal combustion engine. A lawn mower (also known as a grass cutter or simply mower, also often spelled lawnmower) is a device utilizing one or more revolving blades (or a reel) A lawn mower (also known as a grass cutter or simply mower, also often spelled lawnmower) is a device utilizing one or more revolving blades (or a reel) to cut a grass surface to an even height. The blades may be powered by manual force, with wheels mechanically connected to the cutting blades so that the blades spin when the mower is pushed forward, or the machine may have a battery-powered or plug-in electric motor. The height of the cut grass may be fixed by the mower's design but generally is adjustable by the operator, typically by a single master lever or by a mechanism on each of the machine's wheels. Larger lawn mowers are usually either self-propelled "walk-behind" types or, more often, are "ride-on" mowers that the operator can sit on and control. Smaller mowers often lack any form of self-propulsion, requiring human power to move over a surface; "walk-behind" mowers are self-propelled, requiring a human only to walk behind and guide them. A robotic lawn mower ("lawn-mowing bot", "mowbot", etc.) is designed to operate either entirely on its own 8f52464d26

Weeds have existed since humans began settled agriculture have existed since the advent of settled agriculture around 10,000 years ago it has been suggested that the most common characteristic of the ancestors of our presently dominant crop plants is their willingness—their tendency to be successful, to thrive, in disturbed habitats, mostly those around human dwellings. Farmers have likely always been aware of weeds in their crops, although the evidence for their awareness and concern is nearly all anecdotal. 8f52464d26 == Thatch removal (dethatching) == 8f52464d26 Some "noxious weeds", such as ragwort, produce copious amounts of nectar, which is valuable for the survival of bees and other pollinators, as well as providing larval host foods and habitats.... 8f52464d26

Lawn It is also commonly referred to as part of a garden. g. Lawns are usually composed only of grass species, subject to weed and pest control, maintained in a green color (e. referred to as part of a garden. , by watering) A lawn () is an area of soil-covered land planted with grasses and other durable plants such as clover which is maintained at a short height with a lawn mower (or sometimes grazing animals) and used for aesthetic and recreational purposes 8f52464d26

String trimmers are commonly used for cutting low foliage near obstacles or on steep or irregular terrain. Most professional-grade line trimmers take brush cutter attachments for denser vegetation. 8f52464d26 == History == 8f52464d26 Unlike other agricultural sciences like entomology or plant pathology, the emergence of weed science is comparatively recent, occurring largely within the 20th century and coinciding with the development of herbicides. 8f52464d26
