Refrigerator A freezer is a specialized refrigerator, or portion of a refrigerator, that maintains its contents' temperature below the freezing point of water. The optimal temperature range for perishable food storage is 3 to 5 °C (37 to 41 °F). The United States Food and Drug Administration recommends that the refrigerator be kept at or below 4 °C (40 °F) and that the freezer be regulated at −18 °C (0 °F). The refrigerator replaced the icebox, which had been a common household appliance for almost a century and a half. Refrigeration is an essential food storage technique around the world. A refrigerator, commonly shortened to fridge, is a commercial and home appliance consisting of a thermally insulated compartment and a heat pump (mechanical A refrigerator, commonly shortened to fridge, is a commercial and home appliance consisting of a thermally insulated compartment and a heat pump (mechanical, electronic, or chemical) that transfers heat from its inside to its external environment so that its inside is cooled to a temperature below the ambient temperature of the room. A refrigerator maintains a temperature a few degrees above

the freezing point of water. The low temperature reduces the reproduction rate of bacteria, so the refrigerator lowers the rate of spoilage 6ea93be099

Auto-defrost Appliances using this technique are often called frost free, frostless, or no-frost. or semi-automatic defrost (some brands call these "Auto Defrost" while Frigidaire referred to their semi-automatic models as "Cycla-Matic," Kelvinator often Auto-defrost, automatic defrost or self-defrosting is a technique which regularly defrosts the evaporator in a refrigerator or freezer 6ea93be099

This articles puts forward the fringe theory that a miraculous event happened, and underrepresents the scientific consensus that there are non-paranormal explanation to this event. 6ea93be099 Two quick points. First, there should certainly be a properly sourced and neutral section that presents a critical examination of the claimed event. Whether or not that currently exists is a fair topic for discussion. Secondly, I would take a deep breath before labeling this as a fringe theory. I think it doubtful that there would be a consensus in favor of that. While there have been a number of attempts over the years to label various religious beliefs... 6ea93be099

Refrigeration Energy transfer in refrigeration is traditionally driven by physical means (whether ice melting or an electromechanical machine driving the heat exchanger), but it can also be driven by heat pump, magnetism, electricity, laser cooling, or other means. Refrigeration has many applications, including household refrigerators, industrial freezers, cryogenics, and cool store air conditioning. Early refrigeration uses consumable coolants such as ice and dry ice (which are procured through separate means and need periodic replenishing), while modern refrigeration is a self-sustaining heat exchanger process by which thermal energy is transferred against the temperature gradient via the use of a heat-transfer working fluid (also known as refrigerant), which absorbs heat from a low-temperature medium and releases it to another higher-temperature medium, typically involving active phase change via a compressor and aided by a radiator system. Refrigeration has many applications, including household refrigerators, industrial freezers, cryogenics, and cool store Refrigeration is the artificial cooling of a

space, substance, or system to lower and/or maintain its temperature below the ambient temperature. Heat pumps may make use of the heat output of the refrigeration process (such as for water heating), and also may. laser cooling, or other means

Attempts to change this have been met with disruptive edits and edit warring from several users. The article needs to be changed significantly to belong in an encyclopedia.

Timeline of United States inventions (before 1890) Jon Wiley and Sons. Barfly. Appliance Service. Archived from the original on The United States provided many inventions in the time from the Colonial Period to the Gilded Age, which were achieved by inventors who were either native-born or naturalized citizens of the United States. Applications. "Frigidaire Parts". ISBN 978-0-470-66108-6. Copyright protection secures a person's right to his or her first-to-invent claim of the original invention in question, highlighted in Article I, Section 8, Clause 8 of the United States Constitution, which gives the following enumerated power to the United States Congress:. "Barfly Fridge History"

The first cooling systems for food involved ice. Artificial refrigeration began in... Update : The skeptical lead has been restored and the article has been semi-protected, which should prevent some of the problematic edits. It still needs a lot of attention from this board, if you can improve it please do so. KarlPopperty (talk) 21:51, 4 May 2017 (UTC)

"Fridge" might be an Americanism, and might derive from the brand name "Frigidaire" as much as from "refrigerator". ←Baseball = November 30 =

As local governments come under pressure from institutions such as the World Trade Organization and the International Intellectual Property Alliance, some have turned to Linux and other free software as an affordable, legal

alternative to both pirated software and expensive proprietary computer products from Microsoft, Apple and other commercial companies. The spread of Linux affords some leverage for these countries when companies from the developed world bid for government contracts (since a low-cost option exists), while furnishing an alternative path to development for countries like India and Pakistan that have many citizens skilled in computer applications but cannot afford technological investment at "First World" prices. Cost is not the only factor being considered, though - many government institutions (public and military) in North America and the European Union make the transition to Linux... 6ea93be099

List of Linux adopters However, it is the leading operating system on servers. Probert This is a list of companies, organizations and individuals who have moved from other operating systems to Linux.
