Following a history of experimentation and development of advanced driver assistance systems (ADAS) after World War II, two main technologies are now primarily used: LiDAR (Light Detection and Ranging), and visual sensors (cameras) which capture images and video like human eyes. As of 2026, the term "self-driving" lacks an agreed standard definition and is also subject to commercial advertising and branding considerations. They are sometimes called robotaxis,

though this term refers specifically to self-driving cars operated for a ridesharing company 4ce6f297c6

Driving on Shabbat Though Jewish law is based on texts that were written long before the existence of the automobile, when driving one performs various actions which the texts specifically prohibit. some feel that driving involves less effort than walking, while others feel that those who live too far from a synagogue would be cut off from religious According to halacha, the operation of a motor vehicle constitutes multiple violations of the prohibited activities on Shabbat (the Jewish Sabbath) 4ce6f297c6

For example, the vehicle's ignition combusts fuel, which is considered to violate one of the

39 melachot, as well as creating a spark, which is likewise in violation of a related rabbinic (or possibly biblical) prohibition ("igniting a fire"). Modern vehicles also have many other electrical components, such as lights, that are turned on and off during the course of a vehicle's operation, often without the driver's awareness. Isaiah 58:13-14 calls on Jews to limit their travel during Shabbat, and the law of techum shabbat puts limits on the distance one may travel beyond the city/town where one is spending Shabbat, regardless of the method of transportation.

4ce6f297c6 The phrase "driving while black" has been used in both the public and private discourse relating to the racial profiling of black motorists. The term rose to prominence during the 1990s, when it was brought to public knowledge that American police officers were intentionally targeting racial minorities to curb the trafficking of drugs. For example, New Jersey

released state documents in 2000 which showed police training memos instructing officers to make racial judgments in order to identify "Occupant Identifiers for a possible Drug Courier" on the highway.

driving, also called texting and driving, is the act of composing, sending, or reading text messages on a mobile phone while operating a motor vehicle. As a form of distracted driving, texting while driving significantly increases the chances that a driver will be involved in a motor vehicle accident. Texting while driving is considered extremely dangerous by many people, including authorities, and in some places has either been outlawed or restricted 4ce6f297c6

In 2020, Waymo was the first to offer rides in driverless taxis in the operational design domain (ODD) of limited geographic areas, but as of late 2025, no system has achieved full autonomy in all domains - sometimes referred to as "Level 5" on a scale of 0 to 5 levels of automation defined by the global standards organization SAE International, or simply "no driver" as given by the classification system proposed by

While these techniques can be applied by any driver, energy-efficient driving (often called

"eco-driving") has become a major focus of modern fleet management. As a key part of fleet digitalization, companies use telematics to automatically monitor and manage fuel economy. A fleet telematics system collects data on behaviors that waste fuel, such as harsh acceleration, speeding, and idling. This information is then used in driver scoring applications to identify and coach drivers. This is often combined with dedicated fuel-management systems that use high-precision fuel level sensors to get exact fuel consumption data and prevent gasoline theft.

techniques are used by drivers who wish to reduce their fuel consumption, and thus maximize fuel efficiency. Careful use of acceleration and deceleration and especially limiting use of high speeds helps efficiency. are gained while idling, or when the engine is in standby, efficiency increases when shutting off the engine when the car is stopped. Simple things such as keeping tires properly inflated, having a vehicle well-maintained and avoiding idling can dramatically improve fuel efficiency. The use of multiple such techniques is called "hypermiling". Many drivers have the potential to improve their fuel efficiency significantly 4ce6f297c6

Research by the NHTSA suggests that, in the United States in 2021, at any given daylight moment, an estimated 660,000, out of almost 212 million licensed drivers, used their phones while driving. According to a report issued by the U.S. Department of

Transportation, drivers between the ages of 20 and 29 are the most likely to text while driving. In 2010 the International Telecommunication Union said that "texting, making calls, and other interaction with in-vehicle information and communication systems while driving is a serious source of driver distraction and increases the risk of traffic accidents". In 2022, 3,308 people were killed in motor vehicle crashes involving distracted drivers in the U.S. In...
