Apollo TV camera The tape was not spooled on that The Apollo program used several television cameras in its space missions in the late 1960s and 1970s; some of these Apollo TV cameras were also used on the later Skylab and Apollo–Soyuz Test Project missions. All of these cameras required signal processing back on Earth to make the frame rate and color encoding compatible with analog broadcast television standards. These cameras varied in design, with image quality improving significantly with each successive model. Starting with the Apollo 15 mission, a more robust, damage-resistant camera was used on the lunar surface. Two companies made these various camera systems: RCA and Westinghouse. The color camera ran at the North American standard 30 fps. Originally, these slow-scan television (SSTV) cameras, running at 10 frames per second (fps), produced only black-and-white pictures and first flew on the Apollo 7 mission in October 1968. from the Moon, with its fluctuating TV synchronization signals, was sent to the first VTR and was recorded on 2-inch tape. The cameras all used image pickup tubes that were initially fragile, as one was irreparably damaged during the live broadcast of the Apollo 12 mission's first moonwalk. A color camera - using a field-sequential color system - flew on the Apollo 10 mission in May 1969, and every mission after that 41f49c8a7b
