

How Does Lightning Work

== History == In a lightning protection system, a lightning rod is a single component of the system. The lightning rod requires a connection to the earth to perform its protective function. Lightning rods come in many different forms, including hollow, solid, pointed, rounded, flat strips, or bristle brush-like. All lightning rods must be made of conductive materials, such as copper and aluminum. Copper and its alloys are the most common materials used in lightning protection.
