

Longest Snake Of The World

== Materials == f1f85ce3ab A study of mitochondrial DNA showed the Papuan black snake to be the next closest relative to a pair of Australian species, Collett's Snake (*P. collettii*) and the blue-bellied black snake (*P. guttatus*), and is likely to have had its origins in Australia and diverged from a common ancestor in the Pliocene. f1f85ce3ab The reticulated python was first described in 1801 by Johann Gottlob Theaenus Schneider, who described two zoological specimens held by the Göttingen Museum in 1801 that differed slightly in colour and pattern as separate species, *Boa reticulata* and *Boa rhombeata*. The... f1f85ce3ab The river's watershed, which drains parts of six U.S. states, is situated between the Rocky Mountains to the north and east, the Great Basin to the south, and the Blue Mountains and Oregon high desert to the west. The region has a long

Longest Snake Of The World

history of volcanism; millions of years ago, Columbia River basalts covered vast areas of the western Snake River watershed, while the Snake River Plain was a product of the Yellowstone volcanic hotspot. The river was further altered by catastrophic flooding in the most recent Ice Age, which created such features as the Snake River Canyon... f1f85ce3ab == Description == f1f85ce3ab In other words, a snake is a connected open path in the hypercube where each node has exactly two neighbors that are also in the path, with the exception of the first and last nodes, which each has only one neighbor in the path. The rule for generating a snake is that a node in the hypercube may be visited if it is connected to the current node and it is not a neighbor of any previously visited node in the snake, other than the current node. f1f85ce3ab The Papuan black snake is one of several species in the genus *Pseudechis* commonly known as black snakes. It was described in 1878 by Wilhelm Peters and Giacomo Doria in 1878 from material collected in southeastern New Guinea. f1f85ce3ab

List of largest snakes They include anacondas, pythons and boa

Longest Snake Of The World

constrictors, which are all non-venomous. They include The largest living snakes in the world, measured either by length or by weight, are various members of the Boidae and Pythonidae families. The largest living snakes in the world, measured either by length or by weight, are various members of the Boidae and Pythonidae families f1f85ce3ab

There are fourteen or fifteen living snake species that have a maximum mass of at least 50 lb (23 kg), as shown in the table below. These include all species that reach a length of at least 20 ft (6 m). There are also two other species that reach nearly this length – the Oenpelli python (binomial name *Nyctophilopython oenpelliensis*, *Simalia oenpelliensis* or *Morelia oenpelliensis*), and the olive python (*Liasis olivaceus*). The information available about these two species is rather limited. The Oenpelli python, in particular, has been called the rarest python in the world. f1f85ce3ab

King brown snake The species is oviparous. The king brown snake (*Pseudechis australis*) is a species of highly venomous snake of the

Longest Snake Of The World

family Elapidae, native to northern, western, and Central Australia The king brown snake (*Pseudechis australis*) is a species of highly venomous snake of the family Elapidae, native to northern, western, and Central Australia. Its underside is cream or white, often with orange splotches. Its alternative common name is the mulga snake, although it lives in many habitats apart from mulga. First described by English zoologist John Edward Gray in 1842, it is a robust snake up to 3. Sometimes, it is seen in a reddish-green texture. The dorsal scales are two-toned, sometimes giving the snake a patterned appearance. The snake is considered to be a least-concern species according to the International Union for Conservation of Nature, though may have declined with the spread of the cane toad. Despite its common name, it is a member of the genus *Pseudechis* (black snakes) and only distantly related to true brown snakes. The king brown snake is the largest terrestrial venomous snake in Australia. 3 m (11 ft) long. It is variable in appearance, with individuals from northern Australia having tan upper parts, while those from southern Australia are dark brown to blackish f1f85ce3ab

Brown tree snake Brown tree snakes prey on a wide range of animals, from invertebrates to birds and even some small mammals. The snake is slender, which facilitates climbing, and can reach up to 2 metres in length. Its coloration may also vary, some being brown, green, or even red. introduction after the events of World War II, this snake is now infamous for being an invasive species responsible for extirpating the majority of the native bird The brown tree snake (*Boiga irregularis*), also known as the brown catsnake, is an arboreal rear-fanged colubrid snake native to eastern and northern coastal Australia, eastern Indonesia (Sulawesi to Papua), Papua New Guinea, and many islands in northwestern Melanesia. It is one of the very few colubrids found in Australia, where elapids are more common f1f85ce3ab

The varieties of snakes that most often cause serious snakebites depend on the region of the world. In Africa, the most dangerous species include black mambas, puff adders, and carpet vipers. In the

Longest Snake Of The World

Middle East, the species of greatest concern are carpet vipers and elapids; in Central and South America, Bothrops (including the terciopelo or fer-de-lance) and Crotalus (rattlesnakes) are of greatest concern. In South Asia, it has historically been believed that Indian cobras, common kraits, Russell's viper, and carpet vipers were the most dangerous species; however, other snakes may also cause significant problems in this region. While several species of snakes may cause more bodily harm than others, any one of these venomous snakes is still very capable of causing a human fatality should a bite go untreated, regardless of venom capabilities or behavioral tendencies. f1f85ce3ab == Crocodiles == f1f85ce3ab In all, Kaziranga is home to 15 species of turtles, including the endemic Assam roofed turtle, and to one species of tortoise - the brown tortoise. A regional lizard species is also found in Kaziranga - the Assam garden lizard. f1f85ce3ab

List of dangerous snakes Sub-Saharan Africa. This is an overview of the snakes that pose a significant health risk to humans, through

snakebites or other physical trauma. 4 metres per As of 2025, there are 3,971 known snake species worldwide, with around 600 venomous species. It is the second-longest venomous snake species in the world and is the fastest-moving land snake, capable of moving at 4. 3 to 5 f1f85ce3ab

Due to an accidental introduction after the events of World War II, this snake is now infamous for being an invasive species responsible for extirpating the majority of the native bird population in Guam. Currently, efforts are being made to reduce and control the population on Guam and prevent the snake from spreading to other locations. Researchers are employing various methods, including aerial baiting, to attempt to control the population, while multiple agencies continue to fund and support the species' removal. f1f85ce3ab There is considerable variation in the maximum... f1f85ce3ab constrictors. The longest venomous snake, with a length up to 18.5–18.8 ft (5.6–5.7 m), is the king cobra, while contenders for the heaviest title include the Gaboon viper and the Eastern diamondback rattlesnake. All of these

Longest Snake Of The World

three species reach a maximum mass in the range of 6–20 kg (13–44 lb). The largest known snake overall is the extinct Titanoboa.

f1f85ce3ab

Reticulated python The reticulated python (*Malayopython reticulatus*) is a python species native to South and Southeast Asia. It is a non-venomous constrictor and an excellent swimmer that has been reported far out at sea. Due to this, it is one of the most economically important reptiles worldwide. Humans, including adults, have occasionally been killed by reticulated pythons, and several well-documented cases involve victims being swallowed wholly or partly. It is the world's longest snake, and the third heaviest after the green anaconda and Burmese python. In several countries in its range, it is hunted for its skin, for use in traditional medicine, and for sale as pets. Most recent reported fatal predation cases have occurred in Indonesia, especially on Sulawesi and nearby islands. It is the world's longest snake, and the third The reticulated python (*Malayopython reticulatus*) is a python species native to South and Southeast Asia. It
