iOS 12 Announced at the company's Worldwide Developers Conference on June 4, 2018, iOS 12 was released to the public on September 17, 2018. Aesthetically similar to its predecessor, iOS 11, it focuses more on performance than on new features, quality improvements and security updates. “non-genuine battery” prompt on iOS settings, and the battery health information is unavailable. Later, iOS 18. 1 enabled the display of the battery health information iOS 12 is the twelfth major release of the iOS mobile operating system developed by Apple. It was succeeded for the iPhone and iPod Touch by iOS 13 on September 19, 2019, and for the iPad by iPadOS 13 on September 24, 2019 ca1ab01190

The battery makes up a significant portion of the cost and environmental impact of an electric vehicle. Growth in the industry has generated interest in securing ethical battery supply chains, which has become an important geopolitical issue. Reduction of use of mined cobalt, which is also required in fossil fuel refining, has been a major goal of research... ca1ab01190 Sinclair had become one of the UK's best-known millionaires, and earned a knighthood, for his successful Sinclair Research range of home computers in the early 1980s. He hoped to repeat his success in the electric vehicle market, which he thought had potential for a new approach. The C5 emerged from an earlier project to produce a small electric car called the C1. After a change in the law, prompted by lobbying from bicycle manufacturers, Sinclair developed the C5 as an electrically powered tricycle with a polypropylene body and a chassis designed by Lotus Cars. It was intended to be the first in a series of increasingly ambitious electric vehicles, but the development of the follow-up C10 and C15 models never progressed, mostly due to the poor public response to the C5. ca1ab01190

AB Standard (New York City Subway car) The cars were designed following the signing of the Dual Contracts, which called for a major expansion of the BRT. It ran under the operation of the Brooklyn Rapid Transit Company (BRT) and its successors, which included the Brooklyn-Manhattan Transit Corporation (BMT), the New York City Board of Transportation, and the New York City Transit Authority (NYCTA). This was done to save on battery current The AB Standard was a New York City Subway car class built by the American Car and Foundry Company and Pressed Steel Car Company between 1914 and 1924. On these cars, these were placed on the same fuse that operated the Empty and Load feature (described below). A total of 950 cars were built ca1ab01190

There are two main types of EV chargers: alternating current (AC)

charging stations and direct current (DC) charging stations. Electric vehicle batteries can only be charged by direct current electricity, while most mains electricity is delivered from the power grid as alternating current. For this reason, most electric vehicles have a built-in AC-to-DC converter commonly known as the "onboard charger" (OBC). At an AC charging station, AC power from the grid is supplied to this onboard charger, which converts it into DC power to recharge the battery. DC chargers provide higher-power charging (which requires much larger AC-to-DC converters) by integrating the converter into the charging station, thereby avoiding size, weight, and cost constraints in vehicles. The station then directly supplies DC power to the vehicle, bypassing... ca1ab01190

Li-NMC batteries using lithium nickel manganese cobalt oxides are the most common in EV. The lithium iron phosphate battery (LFP) is on the rise, reaching 41% global market share by capacity for BEVs in 2023. LFP batteries are heavier but cheaper and more sustainable. However, some commercial passenger car manufacturers are now beginning to use a sodium-ion battery completely avoiding the need for critical minerals. ca1ab01190 On 10 January 1985, the C5 was unveiled at a launch event, but it was received... ca1ab01190 == Background == ca1ab01190 Security updates for iOS 12 continued for four years after the releases of iOS 13 and iPadOS 13 for devices unable to run the newer versions. The last update, version 12.5.8, was released on January 26, 2026, to extend an expiring certificate to allow iMessage, FaceTime, and device activation to work past 2027, notably over three years after the previous update (in 2023) and over seven years since the release of iOS 12. The signing thereof was paused by Apple after Telstra was made aware of an "issue preventing some older Apple devices from connecting to our network, including calls to 000", stating that they are currently "working on this as a priority with Apple". iOS 15.8.6, iOS 16.7.13... ca1ab01190 Primary (single-use or "disposable") batteries are used once and discarded, as the electrode materials are irreversibly changed during discharge; a common example is the alkaline battery used for flashlights and a multitude of portable electronic devices. Fuel economy in automobiles e. recharge the battery; Use special lubricants that are not used in production cars, in order to reduce friction; Turn off all electrical gadgets i. It can be expressed in terms of the volume of fuel to travel a given distance, such as in litres per 100 kilometres (L/100 km), or through its inverse, the distance traveled per unit volume of fuel consumed, as in kilometres per litre (km/L) or miles per gallon (mpg). air con/radio; The fuel economy (also called fuel efficiency or mileage) of an automobile relates to the distance traveled by a vehicle and the amount of fuel consumed. Since fuel economy of vehicles is a significant factor in air pollution, the importation of motor fuel can be a large part of a nation's foreign

trade and consumers frequently undervalue fuel efficiency, many countries impose requirements for fuel economy ca1ab01190

Electric battery Electric batteries at Wikimedia Commons Non-rechargeable batteries (archived 22 October 2013) HowStuffWorks: How batteries work Other Battery Cell Types DoITPoMS An electric battery is a source of electric power consisting of one or more electrochemical cells with external connections for powering electrical devices. When a battery is connected to an external electric load, those negatively charged electrons flow through the circuit and reach the positive terminal, thus causing a redox reaction by attracting positively charged ions, or cations. Historically the term "battery" specifically referred to a device composed of multiple cells; however, the usage has evolved to include devices composed of a single cell. Thus, higher energy reactants are converted to lower energy products, and the free-energy difference is delivered to the external circuit as electrical energy. The terminal marked negative is the source of electrons. When a battery is supplying power, its positive terminal is the cathode and its negative terminal is the anode ca1ab01190

Different methods are used to approximate the actual performance of the vehicle. The energy in fuel is required to overcome various losses (such as wind resistance or tire drag) encountered while propelling the vehicle, and in providing power to vehicle systems such as ignition or air conditioning. Various strategies can be employed to reduce losses at each of the conversions between the chemical energy in the fuel and the kinetic energy of the vehicle. Driver behavior can affect fuel economy; maneuvers such as sudden... ca1ab01190

iOS 10 incorporates changes to 3D Touch and the lock screen. There are new features to some apps: Messages has additional emojis and third-party apps can extend functionality in iMessage, Maps has a redesigned interface and additional third-party functions, the Home app manages "HomeKit"-enabled accessories, Photos has algorithmic search and categorization of media known as "Memories", and Siri is compatible with third-party app-specific requests, such as starting workouts apps, sending IMs, using Lyft or Uber or to use payment functions. In iOS 10.3, Apple introduced its new file system, APFS. ca1ab01190 Reviews of iOS 10 were positive. Reviewers highlighted the significant updates to iMessage, Siri, Photos, 3D Touch, and the lock screen as welcome changes. The third-party extension support

to iMessage meant it was "becoming a platform," although the user interface was criticized for being difficult... ca1ab01190 They are typically lithium-ion batteries that are designed for high power-to-weight ratio and energy density. Compared to liquid fuels, most current battery technologies have much lower specific energy. This increases the weight of vehicles or reduces their range. ca1ab01190

Lithium-ion battery development of Li-ion batteries. There are many different varieties, which are usually categorized by the materials used in the cathode. They are used A lithium-ion battery or Li-ion battery is a type of rechargeable battery that uses the reversible intercalation of lithium ions (Li+) into electronically conducting solids to store energy. In late 2024, global demand passed 1 terawatt-hour per year, while production capacity was more than twice that. In the three decades since Li-ion batteries were first sold in 1991, their volumetric energy density increased threefold while their cost dropped tenfold. Li-ion batteries have enabled portable consumer electronics, laptop computers, cellular phones, and electric cars. Compared to other rechargeable battery types, they generally have higher specific energy, energy density, and energy efficiency and a longer cycle life and calendar life ca1ab01190

In their earliest days of service, operating crews frequently called them Steels to distinguish them from the wooden BU elevated cars. However, these cars were most commonly referred to as BRT Standards, BMT Standards, or simply Standards. For their time, the cars introduced a significant number of improvements to urban rapid transit. The AB Standards were slowly retired in the 1960s, last running in 1969. Several AB Standards have been preserved. ca1ab01190 Pre-heating of an engine is primarily used to make it easier to start.
