Kreutzer developed a series of small high-winged trimotor light transport aircraft, naming each the Air Coach. Each had a fixed tailwheel undercarriage with the two outboard engines slung from the supporting bracing struts to the high wing. The first model was the K-1 Air Coach of late 1928 which was powered by three 65 hp (48 kW) Velie engines and accommodated four persons. The sole example NX71E first flew on 5 December 1928. It was later fitted with a single 330 hp (246 kW) J6-9 engine and a hopper for agricultural purposes. It crashed at Yuba City California in 1936. 5b68478ad4 Evinrude produced two-stroke direct-injected engines ranging from 4 hp (3.0 kW) to a 3.6L V8 250HP & 300 HP in 1985 and change to 4.0L V8 250 HP & 300 HP in 1986 onward to the end of the production of the V8 configuration. They used carburetors until the late 1990s when EPA clean air regulations mandated new technologies. OMC partnered with FICHT of Germany to introduce direct injection. Extensive and thorough durability testing took place to assess the rigor and longevity of the design but the first design did not pass testing standards. 5b68478ad4 == History ==
